

BENEFITS AND FEATURES:

- An effective acid additive for numerous types of formations
- Clean pipelines and flowlines
- Water treatment
- Great as a cleaner, rust remover
- Multi-component blend of strong and weak acids
- Clear liquid, free of sediments
- Mixes with other strong acids of any concentration
- 100% soluble in acids without separation
- 100% soluble in water
- Non flammable
- Flash Point 212°F
- Freezing Point 32°F

GQ-300[®] ACID ADDITIVE

CONTROLLING
AGENT

GQ-300 is an acid additive that when mixed with strong acids like Hydrochloric (HCL), Sulfuric (H₂SO₄), Phosphoric (H₃PO₄) and Hydrofluoric (HF) Acid in varying proportions eliminates the caustic effect while maintaining the acids specific properties. This significantly reduces or eliminates the risk of personal injury by controlling their volatility.

Many chemical additives are proprietary compositions, but Global Quimica has detailed instructions for mixing and use. The operating engineer's knowledge of the well, the reservoir, and the service company engineer's knowledge of chemical products and treatment processes are required to recommend appropriate treatment fluids. Partnering with Global Quimica in this way greatly improves the overall quality of acid treatments.

GQ-300 is easily cleaned up with regular tap water.
