

## APPLICATIONS

- Downhole continuous or batch treating.
- Surface facilities & gathering systems.
- Tank Treating and blending operations.
- Downstream pipeline and refinery.
- Frac and stimulation additive, replacing conventional solvents and surfactants

## RESULTS & BENEFITS

- Eliminate Paraffin and Asphaltene restricting deposits.
- Strong demulsifier for improved BS&W
- Reduces oil viscosity.
- No chemical finger print in water phase of fluid treated.
- Excellent Corrosion Inhibitor that prevents biomass buildup
- Umbilical certifiable

## HIGHLIGHTS

- Non aromatic solvent based
- No known compatibility issues (chemical, elastomer or steel)
- Offers strong demulsifying capabilities
- Offers emulsion and foam breaking capabilities
- Water wetting abilities
- Flashpoint >172°F

# RDV-00<sup>®</sup> Hydrocarbon Treatment

Chemical Liquid Compound

# RDV-00<sup>®</sup> Hydrocarbon Treatment

Chemical Liquid Compound

BEFORE RDV-00

AFTER RDV-00

RDV-00<sup>®</sup> is an organic chemical liquid compound, designed to eliminate paraffin and asphaltene buildup and precipitation in light oil wells by a cold transformation process (Not Thermal). The energy transformation occurs under a COLD, PERMANENT and Non REVERSIBLE way, resulting in the shortening of long hydrocarbon chains unlike conventional mobilizing agents.

By the reduction of the long hydrocarbon chains a properly treated well will see no buildup/precipitation of paraffin and asphaltenes thus eliminating operational issues related to these. During the reaction RDV-00<sup>®</sup> becomes part of the oil phase and prevents the long chain hydrocarbons from reconnecting permanently changing the oil quality and preventing paraffins and asphaltenes from reforming. **Contact a rep. today!**
